ULTIMATE
POOL & SPA

ULTIMATE POOL & SPA

Are we being shameless by calling this the ultimate collection of tiles for pools and spas? Although it is, in our opinion, our best selection yet of pool and poolside suitable products. But one of the vital elements is missing – your design. Your vision. The list of wants and needs translated into that pool of dreams.

The following pages are here to inspire, inform and guide you. But it's only together can we achieve the shining, shimmering, watery thing of beauty that will become the ultimate pool and spa.

“Water does not resist. Water flows. When you plunge your hand into it, all you feel is a caress.”

Margaret Atwood, writer

Pools Past, Present and Future

The Great Bath at Mohenjo-Daro, Pakistan (in the Indus Valley) is the oldest known swimming pool in the world, probably built around the 3rd Millennium BC. To put that into context, that's the Bronze Age. Pyramids were being built in Egypt. The Great Pool (now an ancient monument) was for special religious functions where water was used to purify and renew. At 12 x 7 metres and 2.4 metres deep, it had two staircases, a brick floor and was filled by rainwater. Several centuries on, and the Romans were taking their bathing seriously too. Heated baths, cold plunge pools, treatments and areas for socialising were key structures in their villas and towns.

In the twenty first century swimming pools are built to fulfil many different functions: health, exercise, sport, relaxation, status, privacy, luxury, family fun, therapy, investment in a property. There are so many different formats too, from naturalistic ponds to roof top infinity pools. The choice is vast, the options almost endless.

What does the future hold? Your guess is as good as ours... wellbeing and health will probably be even more important than now, advances in technology and automation could revolutionise the use of materials and resources.

“Nothing is softer or more flexible than water, yet nothing can resist it.”

Lao Tzu, Chinese philosopher

Why does my pool look blue?

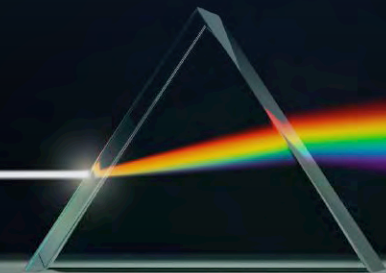

Look at a glass of tap water and it is clear and colourless. And yet the water in pools and the sea appear to be shades of blue. Why?

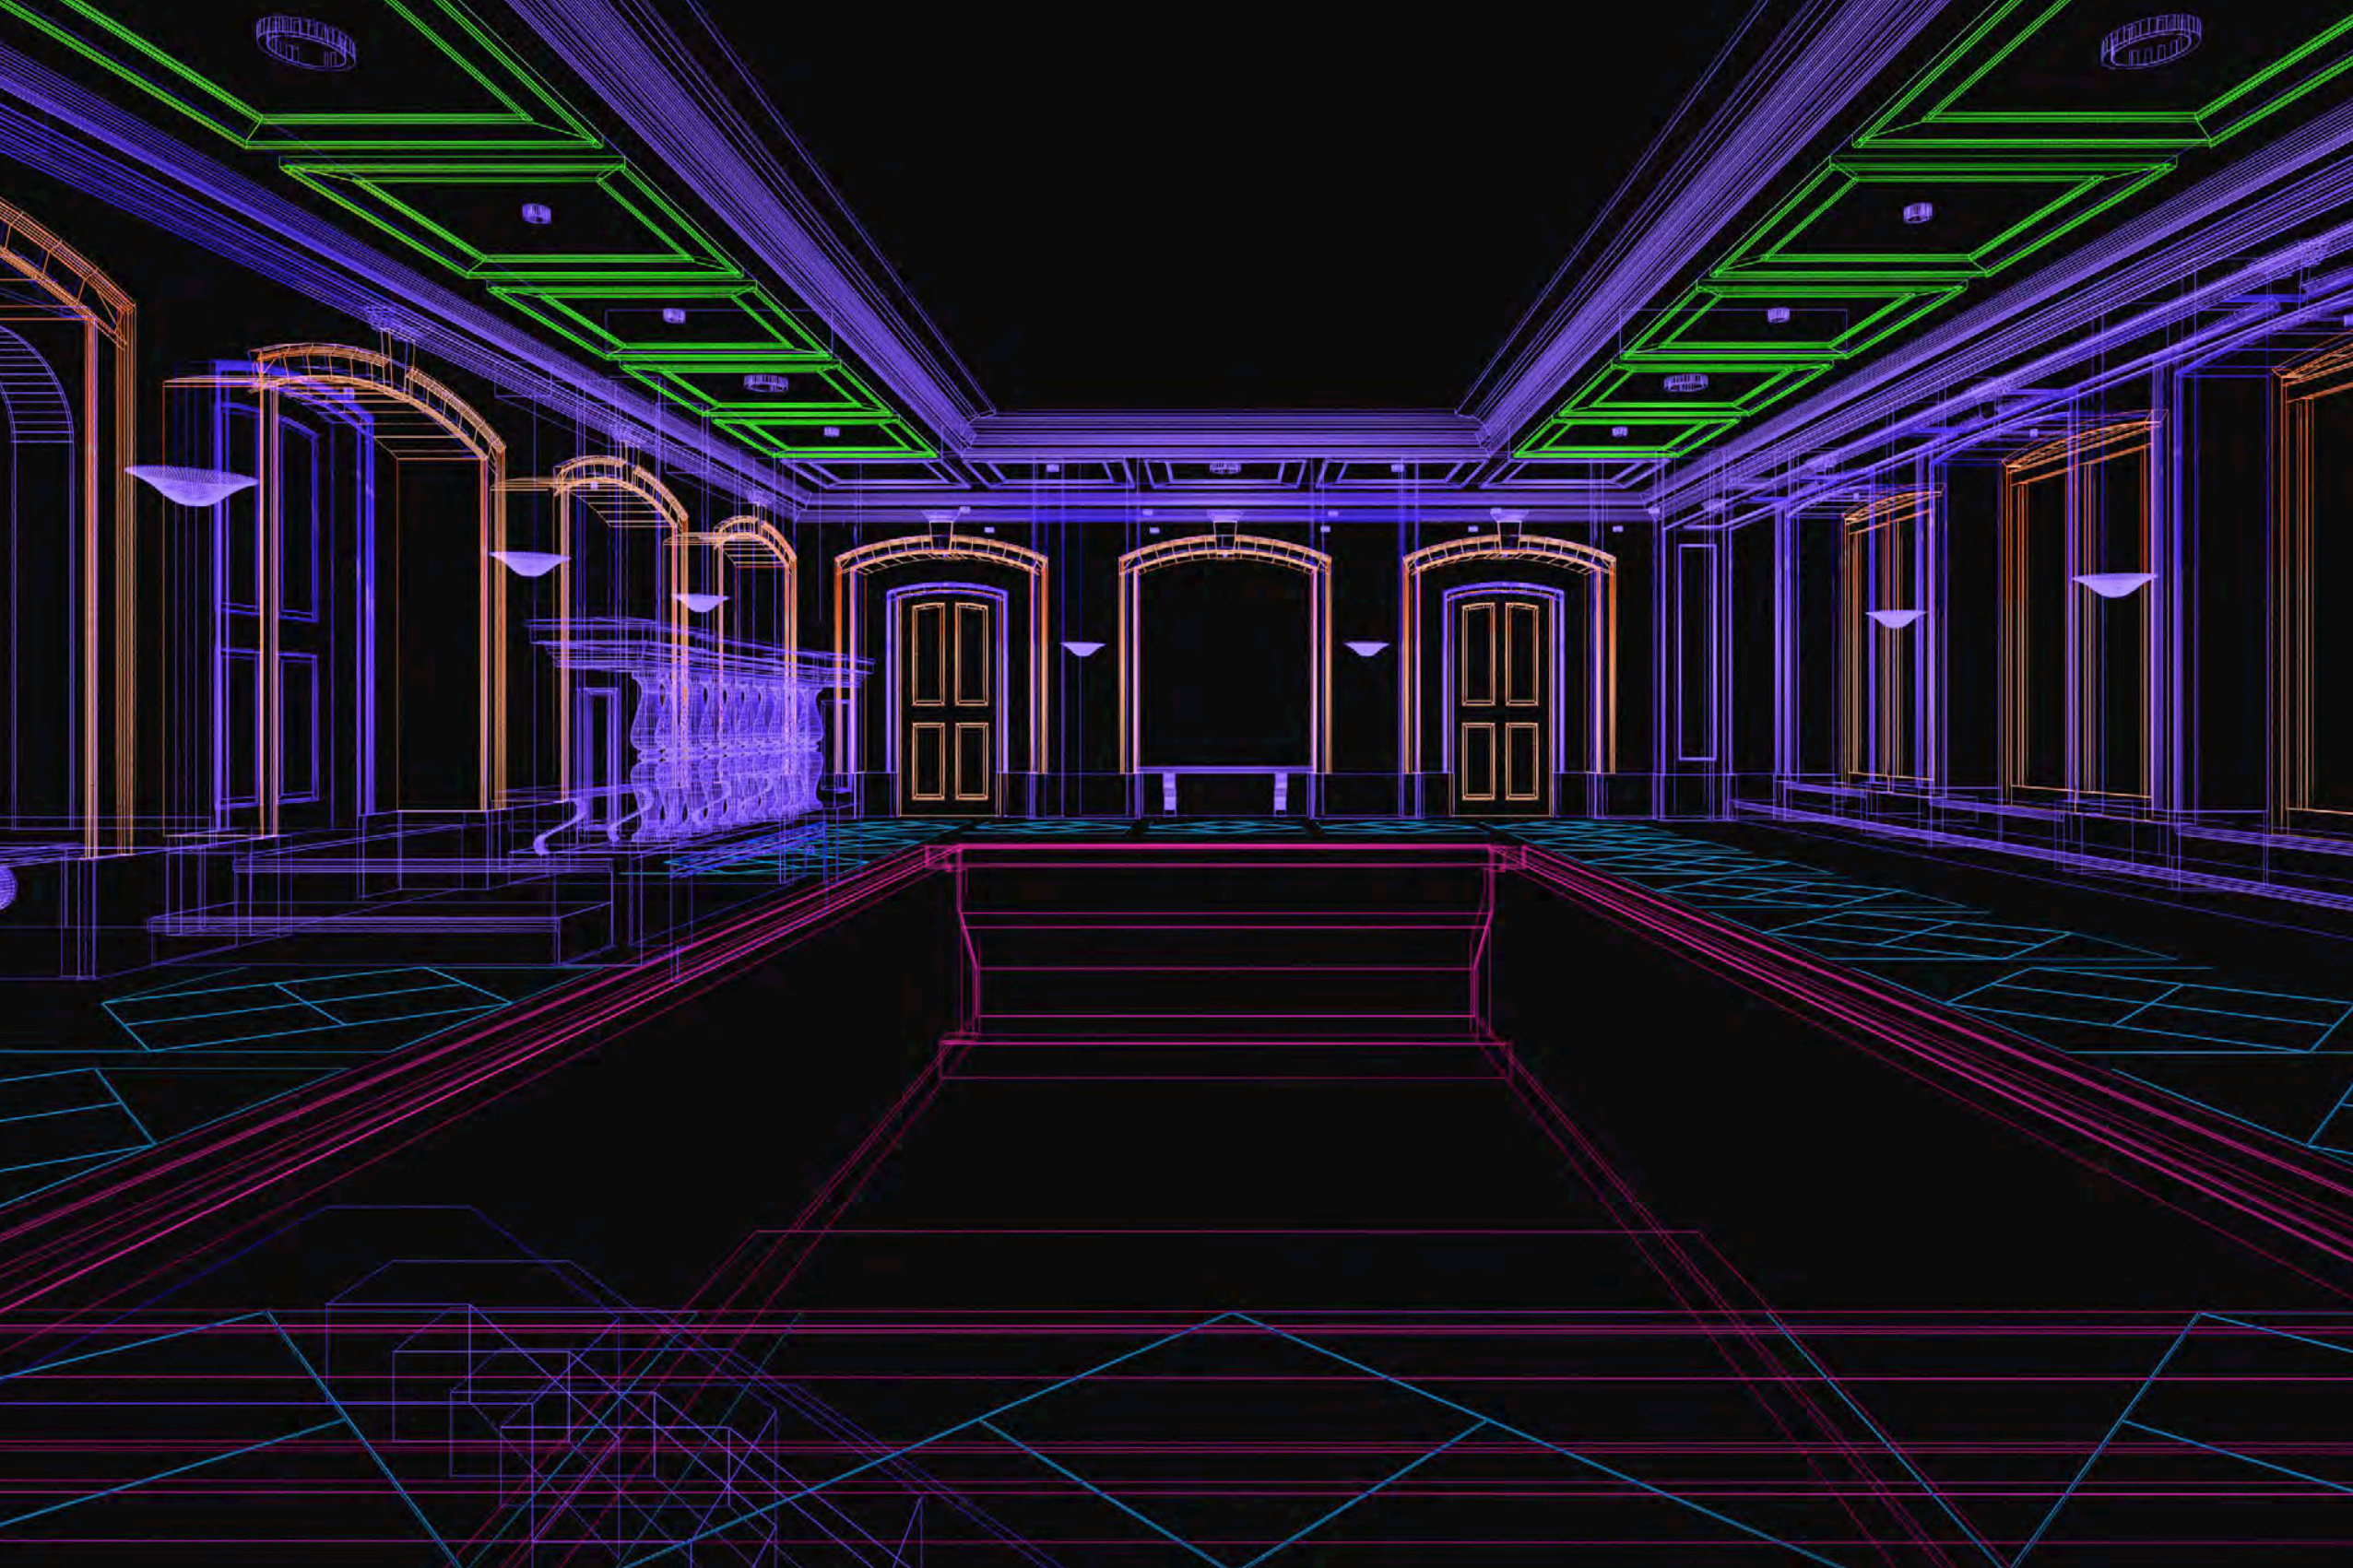

It's all about the light. Sunlight is a spectrum of colours, through the rainbow from red to violet. When the light hits an object, some of the colours will be absorbed and some scattered. For example, an apple looks red because it absorbs all the other colours in the light and scatters only red. Water absorbs different wavelengths of sunlight to different degrees, with the longest wavelengths with the lowest energy being absorbed first. Red is the quickest to be absorbed, then orange then yellow. The blue end of the spectrum travels further through water before being absorbed. The colours disappear underwater in the same order.

The sea seems to be blue because it absorbs all the other colours and only the blue light is scattered or reflected. A glass of water is too small an amount for the reflection of the blue light to be obvious, but when you fill a white bath with water you will see a blue tint. Clean water always appears blue, and deeper water appears more deeply blue as more of the other colours of the spectrum are absorbed.

At what depth underwater do colours disappear?

Red	4.6m
Orange	7.6m
Yellow	10.7m – 13.7m
Green	21.3m – 22.8m

You can have anything you want ...

(well, within reason). Bring along your ideas, your lists of likes and dislikes. Your favourite colours and textures. If you're a creative type, why not put a mood board together? Or if not, a sketch on the back of an envelope will do. Tell us what you really really want out of your pool. We can provide the technical help and guidance on what's possible, safe and legal. And we can create incredibly realistic computer generated images (renders) to visualise just how your pool will look.

"Everything you can imagine is real."
Pablo Picasso

Why do you want a pool?

“If there is magic on this planet, it is contained in water.”

Loran Eisely, anthropologist

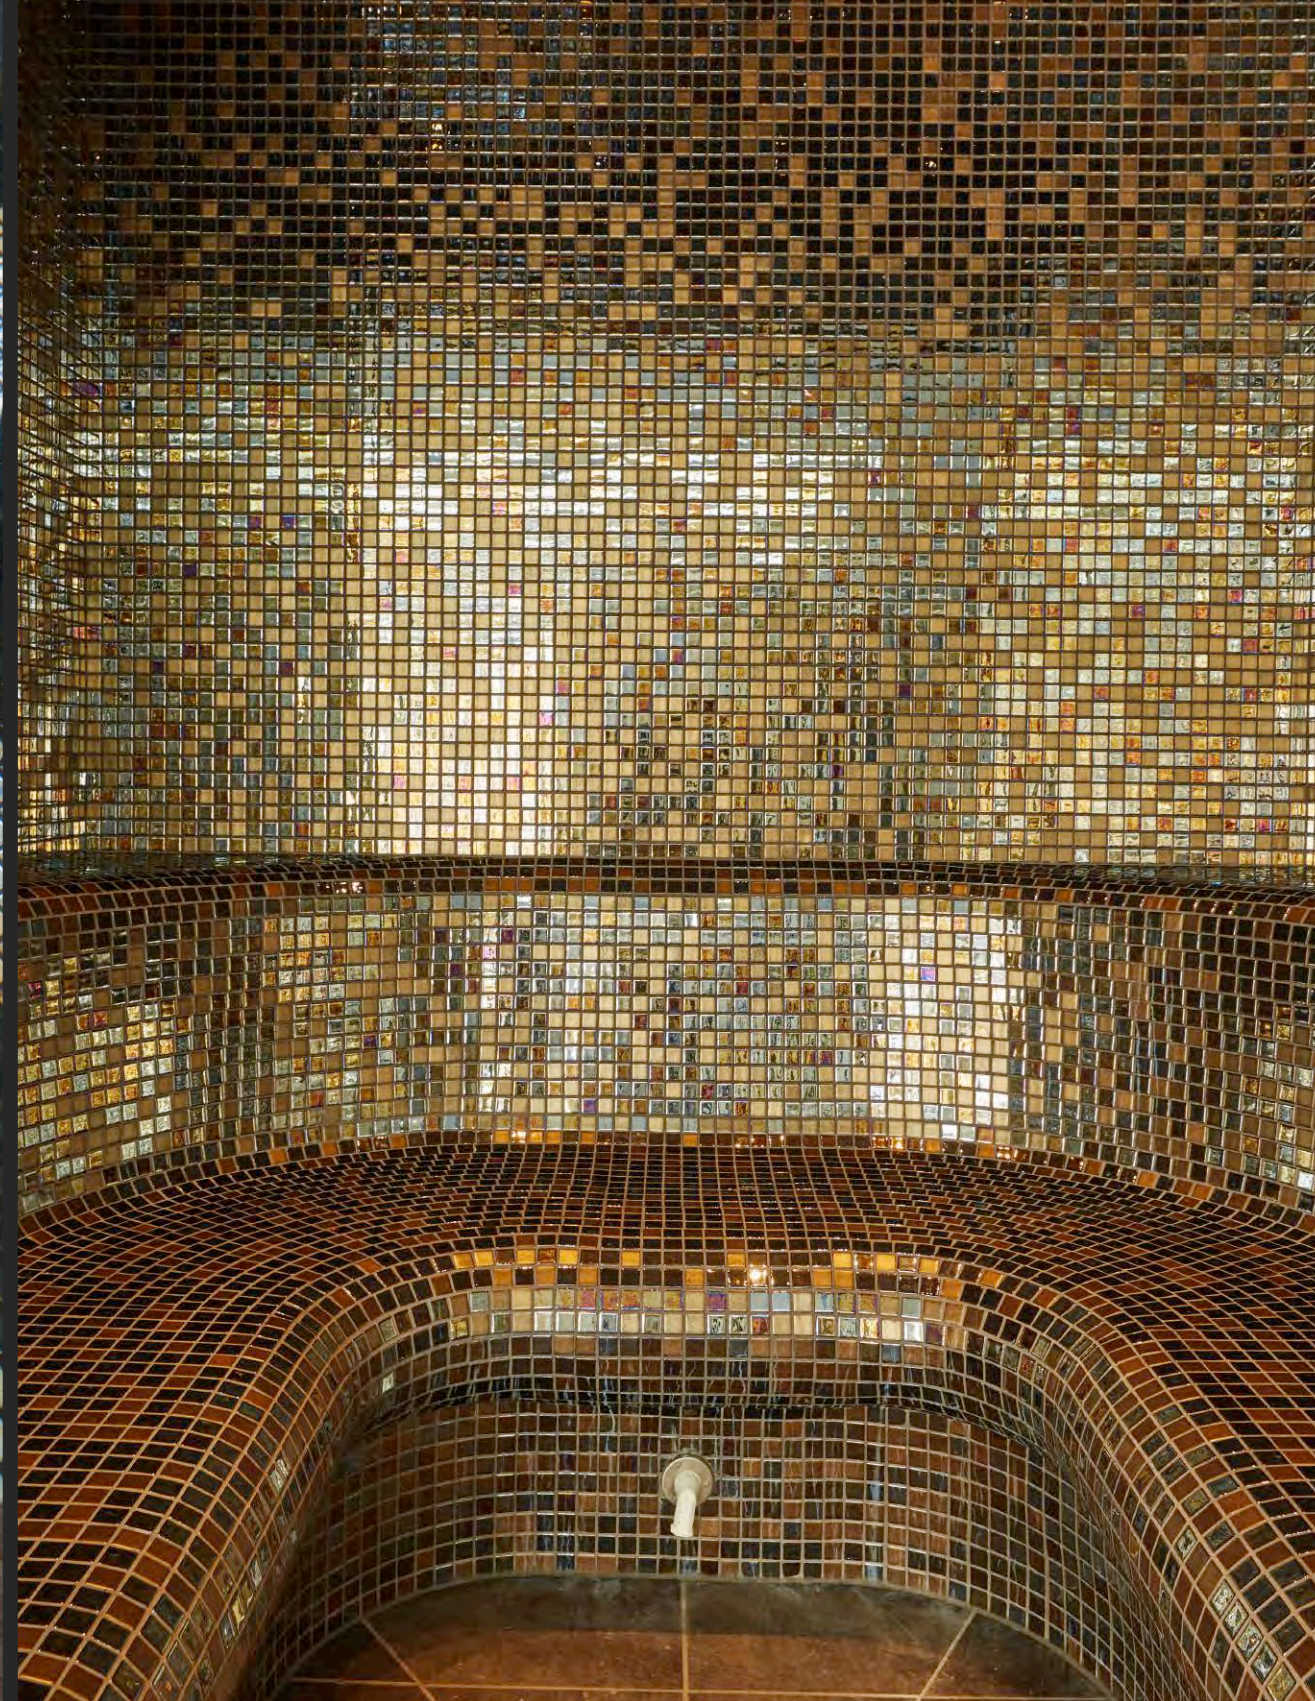

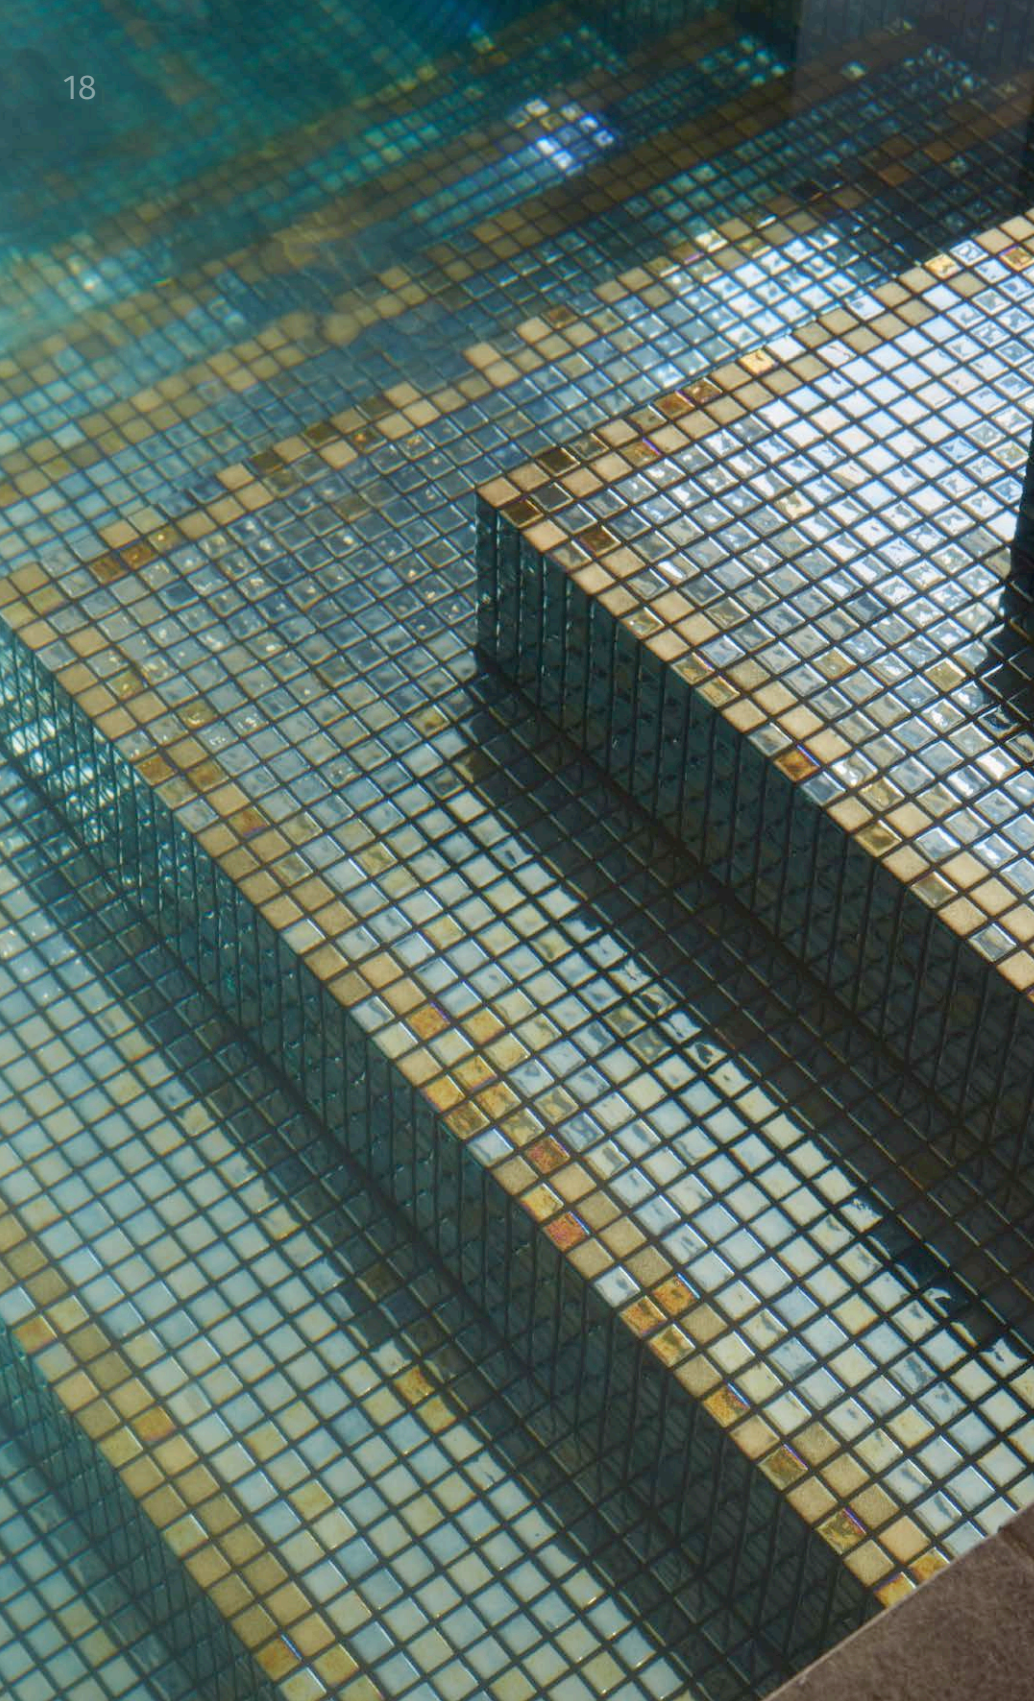

As humans we have always been drawn to the magic of water. Our ancient ancestors had to seek out water to survive. Even now we are unconsciously drawn to glossy objects, with recent research with adults and young children testing the hypotheses that the preference for glossy surfaces stems from an innate preference for fresh water as a valuable resource. Your desire for a pool simply shows how in tune you are with our universal human needs.

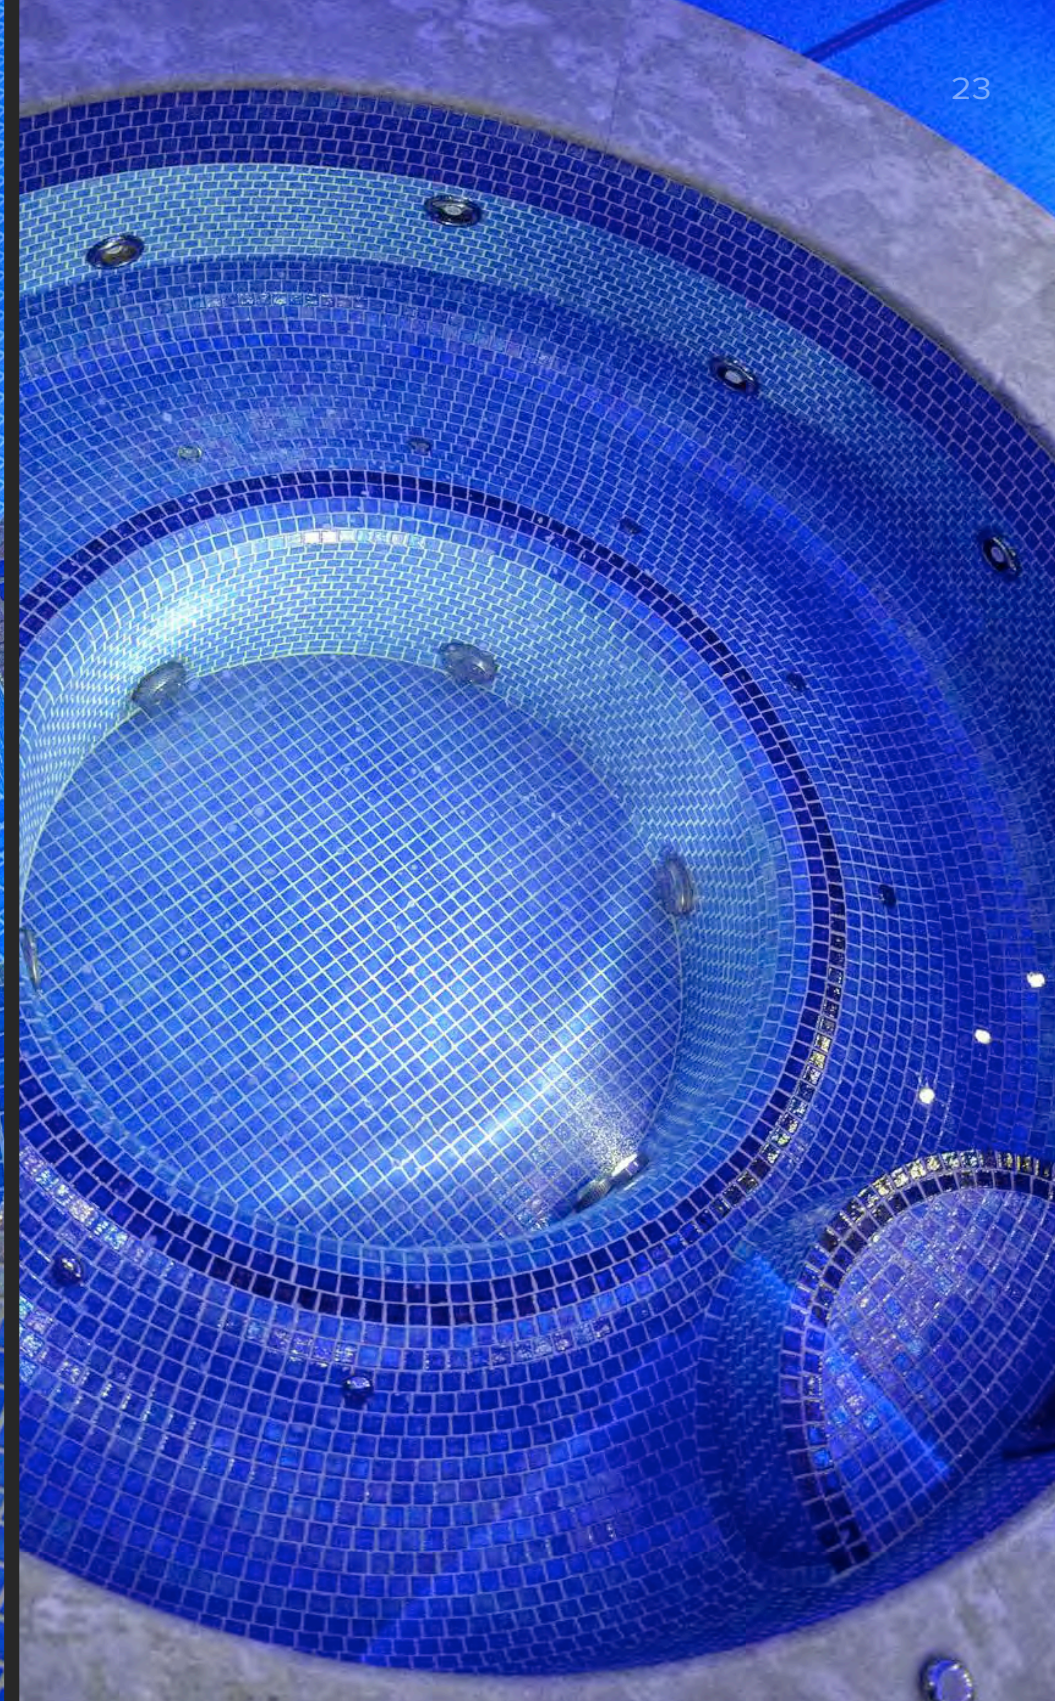

Inspiration

Glass mosaics are the obvious choice for lining a pool. They're practical because the small chips of glass are joined together on the back with silicone dots and are flexible to install, so curves and irregular surfaces don't pose problems (see section on JointPoint® page 65. Other options are paper faced, see pages 68-69). Mosaics are easy to keep clean and fresh looking. They are safe when needed if you go for the slip resistant and Safe Step options (page 56-64). They're versatile because you can mix and match – and there is so much choice...

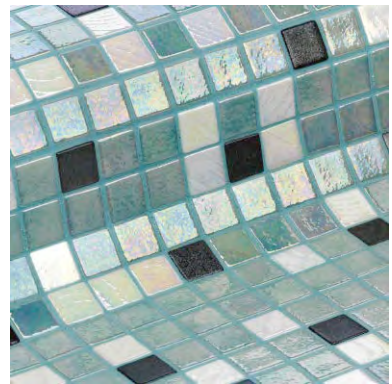

POOL MOSAICS

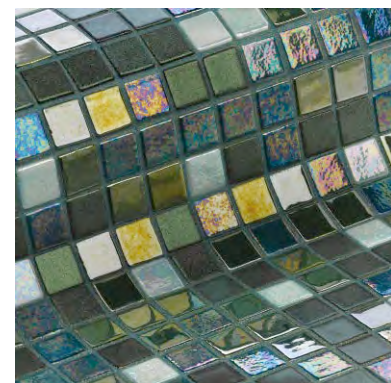

Cocktails 25mm

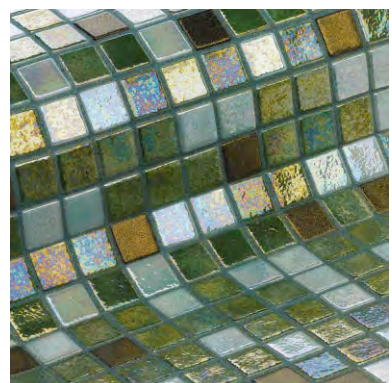

A range of glorious mosaics named after famous cocktails. Like their namesakes, they have been skillfully blended to suit different tastes and moods. With rich colours and shimmering effects, the Cocktail collection is intoxicating both above and below the water line.

Safe Step Mosaics

Step edges, wet room or steam room floors can be both stylish and safe with these slip resistant mosaics. A wide range of colours means they can be used to co-ordinate or contrast with other shades. Featuring a refined new finish called 'Safe Step', these mosaics have a softer feeling, foot friendly surface while maintaining good levels of slip resistance.

Niebla Safe Step Edges

With the same slip resistant texture as the mosaics, these innovative corner pieces provide seamless and safe edging for the transition from pool side to pool and for step areas.

At 52mm in length, the pieces are also small enough to be used effectively to create curves. Sharp edges are completely eliminated with these corner pieces.

- New low-abrasion Safe Step finish
- Slip resistant for safety
- For pool edges both straight and curved, step edges
- Attractive finishing piece
- Easy to install at the same time as the tiling

JointPoint®

Mosaics shown in the previous section displaying the JointPoint® symbol () use a technologically advanced system of silicone connections to hold individual mosaics together in panels. The silicone points are on the reverse of the mosaics and are designed to ensure that the sheets are laid uniformly, with up to 92% of the surface available for the application of adhesive, which results in better adhesion and superior grip. JointPoint® is very easy to work with and install – the sheets are flexible, controllable and easy to cut.

All JointPoint® mosaics shown on pages 27-63	
Individual tile size	Sheet size
25 x 25 x 5mm	312 x 495mm
36 x 36 x 5mm	334 x 334mm
50 x 50 x 5mm	365 x 365mm
98% of the glass used as a raw material in the production process is recycled	

WATER IMMERSION TENSILE ADHESION STRENGTH

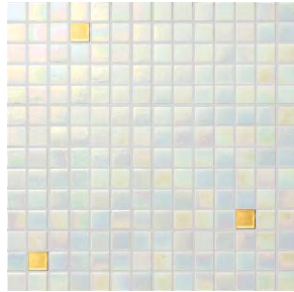

Each family type of mesh/glue backing system for mosaic tiles, recommended for water submerged conditions (not salt water), are tested in accordance with BSEN 1348:2007 Determination of Tensile Adhesive Strength for Cementitious Adhesives.

The tests are conducted by a UKAS accredited testing laboratory, number 0013. The mean value of water immersion tensile adhesion strength is determined for each family type of mesh/glue backing system after allowing for any discarded samples.

EN 12004:2007 + A1:2012 states that the tensile values for a C2 adhesive must be greater than or equal to 1.0 N/mm². Each family type of mesh/glue backing system meets this requirement. For example, the JointPoint® family type of mesh/glue backing system yielded a result of 1.3 N/mm².

It must be noted that each family mesh/glue backing system for mosaics is tested using Ardex x77 C2 adhesive. All test materials, including the adhesive being tested, were conditioned as required by the test method BSEN 1348:2007. The Ardex x77 adhesive was prepared in accordance with clause 7.0 of the EN 1348 standard.

Ardex x77 C2 adhesive is the recommended product for use with all JointPoint® Designworks/Original Style swimming pool mosaic tiles installed in submerged conditions. For salt water swimming pools we recommend the use of an epoxy adhesive only.

new 10mm, 20mm Trend

The enduring appeal of gold. The pieces of gold in these mixes are genuine gold leaf, encapsulated in glass to give that special glow that only comes from the real thing. And here's another interesting fact: unlike other metals, which in their pure form reflect light straight back, electrons in gold act in a way that the gold absorbs some of the blue spectrum light, giving the light that is reflected back its distinctive golden colour (see Why does my pool look blue? Page 9).

The colour mixes shown here are exclusively ours. These Trend mosaics are so new there is no installation photography to show you. Why not be the first to have a Trend Mosaic pool?

POOLSIDE & SPA

Attractive, hard wearing and safe. There should be no compromise with safety when it comes to floor surfaces near pools and in wet areas. Only products that have the appropriate slip resistant qualities should be installed in these situations. But don't worry, there are plenty of options and different styles to choose from.

20mm

Tough and robust at 20mm thick, these tiles which are more like slabs are designed to withstand a great deal of wear and tear. Their rustic look is perfect for outdoor pool surrounds, coping and edgings. We can also create bespoke pieces from these thicker tiles such as grills, gradino profiles and skirtings in-house (see page 133).

Natural Elements 20mm 600 x 600 x 20mm

Standard thickness tiles available in a several formats (see page 74)

These products are available on a special order basis.

FEATURE WALLS

Add drama with a feature wall or walls. Choose from large formats that look like stone and marble, distressed metallic effects, realistic faux wood planking and splitface natural stone.

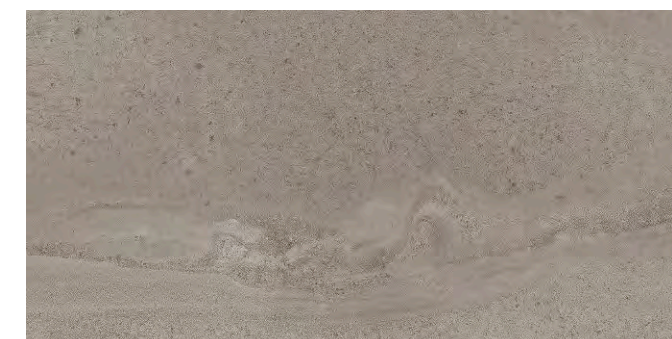

Amelia

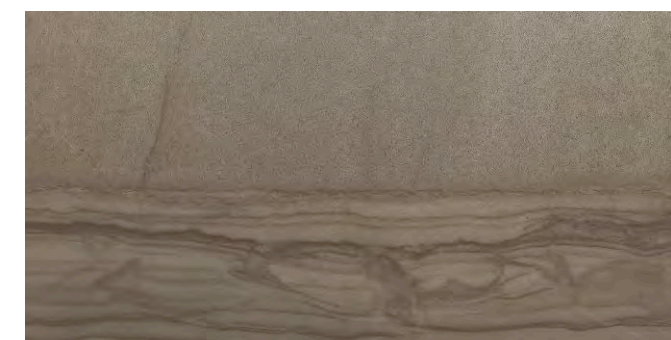

Three gorgeous co-ordinating colours, attractive veining effects (and minimal repeats due to a large number of faces per option) and a range of sizes make Amelia a stand out choice for walls

DETAILS

Why let the poolside let the side down?

Pool drainage hardware is traditionally metal, plastic or composite: all very useful materials that do the job, just not very pretty. For uncompromising style and a near-seamless look we can engineer drainage grilles, pool edges and bullnosed finishing pieces from the same slip resistant porcelain as the main floor.

Elevate your design from grand to sublime with a bespoke pool side solution.

Please note, bespoke drainage pieces are subject to suitability and compatibility with the chosen flooring products.

SAFETY

All tiling products used for flooring need to meet specific criteria.
Our products have passed the tests

There is a duty of care upon all flooring designers, manufacturers, distributors, installers, contractors and on the architects who specify flooring to ensure that flooring surfaces are fit for purpose and meet the Health and Safety Executive's guidelines for slip resistance.

Our tiles are tested for slip resistance and a number of other properties. Pendulum tests are carried out on our premises by our technical team, to determine the barefoot wet co-efficient of friction using a TRRL55 rubber slider.

Tile suitability is indicated on each product page of this brochure.
See overleaf for more information on slip testing methods

INFO

Sample Service

Samples and story boards are available on request.

Dimensions

Nominal sizes and thicknesses are shown throughout the brochure. All dimensions are subject to a tolerance of $\pm 2.5\text{mm}$. When calculating the number of mosaic sheets you will require, please do not forget to make 5% allowance for cutting and wastage.

Colour Variations

There may be distinctive yet subtle variations in shade in many of the mosaics and tiles included in this brochure. A single sample tile should not be taken as a completely accurate indication of colour.

Adhesives and Grouts

The water in your pool must have a pH balance of between 7.2 and 8 to eliminate acid and high alkali attacking the grout, which can cause the tiles to debond. Please be aware that all grouts have different water absorption properties. We recommend that your grout should be between 0.05% and 0.1% water absorption. Some grouts can have up to 7% water absorption, which is likely to affect the adhesion and cause the tiles to debond. Always follow the manufacturers' instructions.

Caution

Coloured grouts may be used on our mosaics, however, they may alter the overall appearance of the mosaic colour. If they are used, we strongly recommend that a small area is tested before installation. Please be aware that certain grouts are not UV resistant and will fade when placed in direct sunlight. Please contact the grout manufacturer for further advice. When installing mosaics alongside thicker tiles that are not in pools, e.g. as a border, we recommend a packing material such as P.C.I. Pedicur boards.

Pools and Power Showers

If using our tiles within a pool that has water movement e.g. flumes and slides, or if using in a shower area which has a power shower, it is important to use adhesive and grout products specified for the purpose. For further advice please contact us.

NB Original Style makes no representations as to the fitness for purpose of third party adhesives and grouts.

Glass Mosaics - Maintenance and Cleaning

Please note, the use of certain acid based cleaning products may cause some mosaics to react and change in character. Do not use hydrofluoric acid pool cleaners as these will have an adverse effect on the mosaics. We recommend the use of pH neutral cleaning products on our tiles unless stated otherwise. Regular cleaning of mosaics is recommended as a build up of certain deposits (such as magnesium and calcium) can be detrimental, even causing acid etching on the surface. These are difficult or, in some cases, impossible to remove if left.

Glass Mosaics - Scratching

As with all glass products, glass mosaics can be scratched. Care should be taken in installation and that glass mosaics are not put in high-risk areas for scratching. It is important to use a fine grade or non-sanded grout to avoid scratching the surface of glass mosaics. Glass mosaics should not be used on counter tops because of the likelihood of scratching.

Glass Mosaics - Use Near Heat Sources

Original Style recommends mosaics are installed a minimum of 3cm from any direct heat source. As glass is a very good conductor of heat caution must be taken when considering installation in areas of extreme heat.

Storage

It is important to keep all Original Style tiles and also any fixing materials such as grouts and adhesives in a cool and dry area before installation.

Photography

Owing to variations in studio lighting and printing inks, the tile colours shown in this brochure may differ slightly from those of the actual tiles. Before making your choice it is always advisable to ask for samples.

Gold Fleck and Iridescent Mosaics

The surfaces of some of the gold fleck and iridescent mosaics are very slightly pitted, which is one of their inherent features. Unless they are sealed first, any pitted surface may become unavoidably filled during the grouting process, resulting in a speckled appearance. We recommend that these tiles are sealed with a removable protective sealer prior to installation.

Please test a small inconspicuous area before installation, following all manufacturers' instructions.

Slip Resistance testing methods

Pendulum Barefoot Wet (BS7976-2 TRRL 55)

This is a swinging arm test apparatus to determine the wet coefficient of friction using a rubber slider that simulates a bare foot in wet conditions.

Accepted limits for flooring using this technique are as follows:

Slip Potential	Range
High	19 and below
Moderate	20 to 39
Low	40 to 74
Very Low	75 and above

Limits of Liability

Original Style accepts no liability for the faulty installation of its tiles. In the case of any claim relating to the tiles themselves, Original Style's liability, to the extent permitted by law, is limited to either the replacement of the product or a refund of the cost of the product, and does not extend to cover any consequential loss. Tiles must be inspected prior to installation and claims cannot be considered after the tiles have been installed. Claims must be reported within seven working days from receipt of the tiles. Tile sizes may vary slightly from the stated nominal dimensions within internationally accepted standards. Please be advised that installation constitutes acceptance of the quality, colour, texture, size and shade of the tiles. Please note the use of certain acid-based cleaning products may cause some of the tiles to react and change in character. Original Style warrants that its tiles conform to their description and are fit for their purpose. Original Style makes no representations as to the fitness for purpose of third party adhesives and grouts.

Original Style makes no other express or implied warranty as to fitness or suitability of the products for particular installations. We extend no guarantees, express or implied, as to wear resistance or maintenance procedures.
